

In order to ensure a more successful equipment installation, these items need to be finalized prior to the pre-installation check.

## **ELECTRICAL**

1. Permanent power needs to be connected to the building & suite.
2. Power needs to be ON during all of installation; so, that equipment can be tested.

## **FLOORING**

1. Flooring needs to be installed on all areas where dental equipment is being installed (Operatories, Sterilization area, Lab, X-ray room & Mechanical closet).

## **AIR CONDITIONER & HEATER**

1. Both the air conditioner and heating system need to be installed and running during installation.

## **PAINTING**

1. All painting needs to be completed.

## **SECURITY**

1. The office needs to be secured with locks and/or security system.

## **IT**

1. The acquisition computer for Panoramic Xray needs to be installed and running so that panoramic xray can be tested and calibrated.
2. Internet access; so, that digital equipment can be installed and calibrated.

## **RECEIVING**

1. An office representative needs to be at the jobsite to receive & sign off on the dental equipment. Failure will result on the equipment being brought back to warehouse and installation delayed.
